ABSTRACT

In a nanocarbon producing apparatus (173), a plane mirror (169) and a parabolic mirror (171) are provided in a producing chamber (107). An outgoing light beam, emitted from laser beam source (111) and transmitted through a ZnSe window (133), is reflected by a plane mirror (169) and a parabolic mirror (171). Further, after the light beam is focused by the parabolic mirror (171), a surface of a graphite rod (101) is irradiated with the light beam.
